

Equipment Displays

2 Window Display

(standard on all machines that have a display)

Technical Information:

Height: 12" / 305 mm

Width: 4" / 102 mm

Length: 1" / 25 mm

Weight: 1lbs / 0.5 kg

This display discreetly provides both resistance information and repetitions performed in clear one inch numbers. The two window displays measure in either one pound or one kilogram increments for the single station units and 1/10 pound or 1/10 kilogram increments for the Infinity Series. This display is ideal for giving useful information to the user while allowing them to concentrate on their workout routine.

POWER 5 Window Display

Technical Information: (optional upgrade)

Height: 12" / 305 mm

Width: 4" / 102 mm

Length: 1" / 25 mm

Weight: 1 lb / 0.5 kg

The five window power display offers the same features as the two window display plus: Chip system, Power Output, and Power Test. The Keiser Chip system is a simple to use electronic workout card that recalls the previous workout and settings and downloads the data easily into a personal computer without any extra equipment or wiring. The power output windows display your power per repetition in watts, as well as keeping track of your maximum power repetition for the set. The power test is an easy to use protocol that displays the optimal resistance for exercisers to use to achieve their maximum power.
